asynql

Release 0.1.0

k8s-team

Jul 15, 2019

USERGUIDE

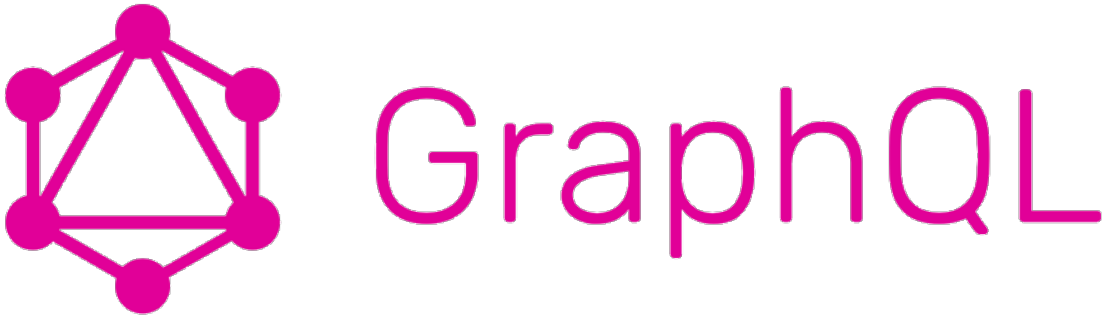
1 Usage **3**

2 Contents **5**

2.1 GQLModel 5

2.2 CHANGELOG 5

3 Indices and tables **7**



Asyncio `GraphQL` client

CHAPTER

ONE

USAGE

```
from asynql import GQLModel

class Address(GQLModel):
    __one__ = 'address'
    __many__ = 'addresses'

    lat: float
    lon: float
    city: str
    line: str
```

We need `__one__` and `__many__` to be specified to customize query for one item or for many items.

CHAPTER

TWO

CONTENTS

2.1 GQLModel

GQLModel is a base model class for your *GraphQL* models. This models are used in *GraphQL* query creation.

2.2 CHANGELOG

2.2.1 WIP

Features

- Implement GraphQL Query Builder for get many objects requests (#3)

CHAPTER

THREE
