USERGUIDE

1	Usage	3
2	Contents	5
2.1	GQLModel	5
2.2	CHANGELOG	5
3	Indices and tables	7

GraphQL

Asyncio GraphQL client

USAGE

```
from asynql import GQLModel

class Address(GQLModel):
    __one__ = 'address'
    __many__ = 'addresses'

    lat: float
    lon: float
    city: str
    line: str
```

We need `__one__` and `__many__` to be specified to customize query for one item or for many items.

CONTENTS

2.1 GQLModel

GQLModel is a base model class for your *GraphQL* models. This models are used in *GraphQL* query creation.

2.2 CHANGELOG

2.2.1 WIP

Features

- Implement GraphQL Query Builder for get many objects requests (#3)

INDICES AND TABLES

- `genindex`
- `modindex`
- `search`
